GENERAL INFORMATION:
APPLICANT: Cocks, Benjamin G.
APPLICANT: Susan G. Stuart
APPLICANT: Jeffrey J. Sellhamer
ITILE OF INVENTION: COMPOSITION FOR THE DETECTION OF BLOOD CELL GENE
TITLE OF INVENTION: EXPRESSION
NUMBER OF SEQUENCES: 1508
CORRESPONDENCE ADDRESS:
ADDRESSEE: INCYTE PHARMACEUTICALS, INC.
STREET: PALO ALTO
                                                                                                                                                                                                                                                                                                                                                          1214

Mean 34.572; Variance 151.305; scale 0.228 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Monoclonal antibodies were raised against recombinant interleukin-8 (IL-8) receptor subtypes A and B from both human and rabbit sources (IL-8) receptor subtypes A and B from both human and rabbit sources (IL-8) receptor sources a high affainty receptor and the B subtype receptor (IL-8rh) is a low affainty receptor. The monoclonal antibody (mAb) pref. binds to the IL-8 binding domain thus blocking its activation. The mAbs are useful for treating inflammatory disorders (see key words) and for detecting the presence of neutrophils in a biological sample. The mAbs are also useful in the isolation of IL-8 receptors from a mixture.

Rabbit high affinity II-8 receptor gene was isolated from rabbit peritoneal neutrophils and used as a source of poly(A)+ RNA, to produce a rabbit neutrophil cDNA library. 250,000 recombinant plaques were screened for those which hybridized to an antisense oligonucleotide (030015). This probe was designed based on the sequence derived from the second transmembrane domain of G-proteincoupled receptors. After tertiary screening, six plaques were kb in size. This insert was sequenced. The protein deduced from
                                                                                                                                                                                                                                                                                                                                                   04-APR-1993 (first entry)
Sequence in a high affinity recombinant rabbit interleukin-8 (IL-8) receptor polypeptide in F3R.
IL-8 receptor polypeptide; G-protein-coupled receptor.
Oryctolagus cuniculus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              325
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    278 iqetcqrrndidraldateilgflhsclnpiiyafigqnfrngflkml 325

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                receptor polypeptide
Disclosure; Page 51-54; 83pp; English.
A cDNA library constructed from human neutrophil mRNA in pRK5B was transfected into COS-7 cells, and the cells were screened with 1251-IL-8. The DNA sequence of isolated cDNA clone pRK5B.118rl.1, encopting human IL-8 receptor, is given in Q80520 and the predicted amino acid sequence in R688ll. The receptor is used to raise antibodies that neutralize the activity of PF4AR, e.g. IL-8 receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27 y-spcmletetlnkyvviiayalvfllsllgnslvmlvilysrvgrsvtdvyllnlalad 85

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A4-APR-1996 (first entry)
Recombinant high affinity interleukin-8 receptor subtype A.
Il-88, IL-88, receptor; monoclonal antibody; inflammatory disorder;
anaphylaxis; systemic lupus erythematosus; rheumatoid arthritis;
systemic necrotising vasculitis; psoriasis; asthma; allergy; ARDS;
adult respiratory distress syndrome; neutrophil detection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          202 KLIMLGLELLFGFFIPLMFWIFCYTFIVKTLVQAQNSKRHKAIRVIIAVVLVFLACQIPH

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             261
                                                                                                                                         Monoclonal antibody against recombinant IL-8 receptor polypeptide useful for treating inflammatory disorders, for detecting neutrophil(s) and for isolating IL-8 receptor from liq.mixt. Disclosure; Fig 2A-B; 74pp; English.

Disclosure; Fig 2A-B; 74pp; English.

Monoclonal antibodies were raised against recombinant interleukin-8 (IL-8) receptor subtypes A and B from both human and rabbit sources (R80950-53 encoded by Q9949-52). The A subtype receptor (IL-8TA) is a high affinity receptor and the B subtype receptor (IL-8TB) is a low affinity receptor. The monoclonal antibody (mAb) pref. binds to the IL-8 binding domain thus blocking its activation. The mAbs are useful for treating inflammatory disorders (see key words) and for detecting the presence of neutrophils in a biological sample. The mAbs are also useful in the isolation of IL-8 receptors from a mixtur
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       27 y-spcmletetinkyvviiayalvfilsilgnslvmlvilysrvgrsvtdvyllnlalad 85

Example 2; Columns 41-44; 62pp; English.
Antibodies directed against the interleukin-8 receptor B can be used to treat or prevent inflammation e.g. psoriasis, dermatitis, rheumatoid arthritis and particularly inflammatory bowel disease and chronic lung inflammation. When immobilised, these antibodies may be used to detect interleukin-8 receptor B expression in cells and tissues and for affinity purification of interleukin-8 receptor B from cells. A sequence encoding amino acids 23-314 of this fragment of the high affinity interleukin-8 receptor, was used to probe lambda gt10 cDNA libraries for the human interleukin-8 type B receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               86 llfaltlpiwaaskvng-wifgtflckvvsllkevnfysgilllacisvdrylaivhatr 144

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             claim 7; Fig 2; 78pp; English.

A cDNA library constructed from human neutrophil mRNA in the mammalian expression vector pRKSB was transfected into COS-7 cells as pools of 2500 clones. One positive pool from the first 58 transfections was partitioned into smaller pool from the first 58 transfections was partitioned into smaller pools until a pure clone (pRK5B.118r1.1) was obtained. The ORF encodes a protein of 350 amino acids which shares several features with the G-protein coupled receptors of the rhodopsin superfamily, including 7 hydrophobic (transmembrane) domains. The IL-8 receptor is a preferred PF4AR superfamily member of the invention. See also 029506 and 037107.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              rmvlrilphtfgfivplfvmlfcygftlrtlfkahmggkhramrvifavvlifllcwlpy 258

Monoclonal antibody against recombinant IL-8 receptor polypeptide - useful for treating inflammatory disorders, for detecting neutrophil(s) and for isolating IL-8 receptor from liq.mixt.

Claim 6; Fig 3A-B; 74pp; English.

Monoclonal antibodies were raised against recombinant interleukin-8 (IL-8) receptor subtypes A and B from both human and rabbit sources (R80950-53 encoded by 099949-52). The A subtype receptor (IL-8RA) is a high affinity receptor and the B subtype receptor (IL-8RA) is a high affinity receptor. The monoclonal antibody (mAb) pref. binds to low affinity receptor. The monoclonal antibody (mAb) pref. binds to useful for treating inflammatory disorders (see key words) and for detecting the presence of neutrophils in a biological sample. The mabs are also useful in the isolation of IL-8 receptors from a mixture.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    208 vlrilpqtfgfilpllvmlfcyvftlrtlfgahmgqkhramrvifavvlifllcwlpynl 267

Two primers (066148, 066149) were used to amplify human genomic DNA purified from leukocytes. Approximately 1000 clones were isolated after the initial amplification reation and probed with sequences specific for seven transmembrane receptors IJSR1, AT2R and R20. Clones which did not hybridise were then chosen for sequence analysis. Three new clones were identified that appeared to encode seven transmembrane receptor segments. Two more primers (Q66151, Q66151) were used to isolate a full length version of one of these clones designated V31 (See Q66153). This is the sequence encoded by exon 3 of the V31 genomic clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Partial sequence of seven transmembrane receptor (V31).
Primer; seven transmembrane receptor; receptor; amplification; PCR;

                                             Example 2: Page 46-48; 100pp; English.

Example 2: Page 46-48; 100pp; English.

Two primers (060149) were used to amplify human genomic DNA purified from leukocytes. Approximately 1000 clones were isolated after the intial amplification reation and probed with sequences specific for seven transmembrane receptors IISR1, AT2R and R20.

Clones which did not hybridise were then chosen for sequence analysis. Three new clones were identified that appeared to encode seven transmembrane receptors segments. Two more primers (06615), 066152) were used to isolate a full length version of one of these clones, one of which was designated V31 and encoded this

Thoulving the receptors.

Claim 1; Page 52-53; 100pp; English.

A human cDNA encoding the seven transmembrane receptor V31 was isolated by first amplifying a partial cDNA clone from a human consil cDNA library using two primers (Q66154, Q66155). The resulting amplified products were probed using two radioactively labelied sequences (Q66156, Q66157). A hybridising band was isolated from the gel and cloned. The resulting clone was isolated from a peripheral blood mononuclear cell library using V31 specific primers (Q66159, Q66152).

Clone PBMC75 was isolated and the V31 cDNA insert in the clone was squence 378 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          7;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                26-JUL-1993 (first entry)
Human IL-8 receptor from clone p2.
Interleukin-8 receptor; probes; gene therapy; gro receptor; intracellula-calcium mobilising; ligand-binding; MIP-2 receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  7;

                                                                                                                                                                                                                                      rexpressed in Xenopus lagvis convicts or transfected host cells, for screening ligands of IL-8 receptor and gene therapy claim 1. Fig 3: 39pp; English.

Count in the converse of a sucrose gradient were made in UnixAp. The neutrophils sepd. of a sucrose gradient were made in UnixAp. The libraries were screened with F3R oligonucleotide probe (from rabbit in-8 receptor) and under low stringency with a p2 cDNA probe synthesised from random primers, to isolated the clone p2, encoding human IL-8 receptor protein. The presence or absence of the DNA ecoding IL-8R or related MIP-2 receptor may be detected using portions of the p2 clone as probes. P2 may also be used to screen for ligands of IL-8R in Phe IL-8R is a gro receptor and has intracellular calcium-mobilising and ligand-binding properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  215

Rabbit high affinity IL-8 receptor gene was isolated from rabbit peritoneal neutrophils and used as a source of poly(A)+ RNA, to produce a rabbit neutrophil cDNA library. 250,000 recombinant placed to plaques were screened for those which hybridized to an antisense oligonucleotide (Q30015). This probe was designed based on the sequence derived from the second transmembrane domain of G-protein-coupled receptors. After tertiary screening, six plaques were coupled receptors. After tertiary screening, six plaques were isolated. The insert was sequenced. The protein deduced from the F3R clone demonstrates that it belongs to the family of G-protein-coupled receptors. The deduced protein sequence indicates seven putatuve transmembrane segments. A human peripheral blood leukocyte lambda gill cDNA library (5' stretch) was screened with a 652 bp Econl/BamHl fragment (including nucleotides several human clones which hybridized to the rabbit II-8 probe were isolated. The insert of one such clone, termed 4AB was sequence 360 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              49 yfvvilyalvfllsllgnslvmlvilysrvgrsvtdvyllnlaladillfaltlpiwaask 108
